DALK& DMEK LAMELLAR CORNEAL SURGERY

The course will be held in Centro Tecnológico de Formación in A Coruña and it will consist of two types of sessions, the instructional ones, and the wet lab sessions. The wet lab will be held in this experimental center which is equipped with 10 microscopes, individual camera and screens where the instructor can show videos and each participant can record his/her own surgery. For the wet lab, human corneas which have been discarded for clinical use will be available, –four corneas for each participant– and all the necessary materials for the wet lab will be provided, artificial anterior chamber, trephines, punch, hockey knife, forceps, tripan blue... The instructional part will be carried out almost exclusively with videos showing each step of the surgery as clearly as possible, followed by discussion of the preferences among speakers.

Attendants will be divided into two groups. In the first session all the twenty doctors will attend the instructional course for DALK. After that first session, 10 of them (group 1) will perform the wet lab of DALK while the other group (group 2) will attend the instructional course for DMEK. In the next session, they will interchange activities, with the second group (group II) performing the wet lab for DALK, while group I attends the instructional course for DMEK. After that, group I will perform the wet lab for DMEK, while group II will attend another instructional session; and in the next session, they will interchange again, with group II performing the wet lab of DMEK while group I attends the instructional session. On the 18th in the morning, there will be a talk on corneal tissue evaluation followed by a visit to the Eye Bank where attendants will be able to see a practical demonstration. The course will end with a session on special cases of DALK and DMEK.

PROGRAM

INSTRUCTIONAL SESSION

WET LAB SESSION

THURSDAY 08/6/23

GROUP 1

Educational activity for ophthalmologists specialized in corneal surgery with interest in lamellar corneal surgery (beginners and early starters). Expert surgeons in the field will share their tips and tricks and the details of the procedure with you. Audience will be limited to 20 attendees, with groups of 10 people during the web lab sessions so participants will enjoy personal advice and guidance.
